The beautiful velvety surface plus exceptional stability guarantee wonderful sauna experiences for many years to come. At the same time, the trees that have escaped deforestation continue to thrive around.

A – Top layer; B – Glulam layer

CLASSIC AND DIGNIFIED DESIGN

The wall finish is the most important design element of the entire sauna. We have developed a product line that uses environmentally friendly technology – lining boards with a classic design and a silky surface finish.

Standwood Respect lining boards are available in two different shades. In this way, they offer your sauna a pleasantly relaxed and luxurious design.

ENVIRONMENTALLY FRIENDLY & STABLE

Standwood Respect sauna lining boards are made of three layers.

.....
 This makes it possible to use up to 7 times less trees to produce the same amount of lining boards.

Today, many customers consider the environmentally friendly production as the first argument for purchase. Standwood Respect is the most forest-friendly lining board in the world. We are very proud of it. Let's give our grandchildren the opportunity to enjoy the beauty of the forest!

The surface finish of the lining boards is exactly the same as of the classic boards. The product is also suitable for interior use.

Thanks to the internal 3-layer structure, the boards are very stable and do not bend or warp.

2x FASTER INSTALLATION TIME

Due to its extremely stable shape, the installation of the Respect lining boards is twice faster than with the classic one. All boards are straight and smooth, which ensures quick and handy installation. A perfect end result is guaranteed.

.....
 The surface of the board attached to the wall does not bend at all, which ensures the perfect appearance for many years.

The panel requires the same cleaning and care as conventional treated wood.

SOLID AND BEAUTIFUL

We only use certified glues for gluing the lining board together. Sauna use is safe even at high temperatures.

Standwood Respect has the following certificates:
